PAPER NUMBER

2176

DATE MAILED: 01/11/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

09/543,962

Applicant(s)

SHANAHAN ET AL.

Examiner

Maikhanh Nguyen

Art Unit

2176

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 21 October 2005.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-37 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-37 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

1. This action is responsive to communications: RCE filed 10/21/2005 to the original application filed 04/07/2000.
2. Claims 1-37 are currently pending in this application. Claims 1-2, 19-20, and 28-29 have been amended. Claims 1, 19, and 28 are independent claims.

Request Continuation for Examination

3. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 10/21/2005 has been entered.

Specification

4. The cross reference related to the application cited in the specification must be updated (i.e., update the relevant status, with PTO serial numbers or patent numbers where appropriate, on page 1). Correction is required.

Claim Rejections - 35 USC § 112

5. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

6. Claims 1-37 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

As to independent claims 1, 19, and 28, the claimed *context* (“*personality*”) renders the claims indefinite because it is unclear if *context* is the same as “*personality*”.

As to independent claim 1, the limitation “*a service provider*”, recited at lines 13-15, is vague and indefinite. It is unclear if the limitation is referring to “a service provider” recited at line 6.

As to independent claim 19, the limitation “*a service provider*”, recited at line 16, is vague and indefinite. It is unclear if the limitation is referring to “a service provider” recited at line 6.

As to independent claim 28, the limitation “*a service provider*”, recited at lines 12-13, is vague and indefinite. It is unclear if the limitation is referring to “a service provider” recited at line 6.

Dependent claims 2-18, 20-27 and 29-37 are rejected for fully incorporating the deficiencies of their base claims.

Claim Rejections - 35 USC § 101

7. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

8. The language of claims 1-37 raises a question as to whether the claim is directed merely to an abstract idea that is not tied to a technological art, environment or machine which would result in a practical application producing a useful, concrete, and tangible result to form the basis of statutory subject matter under 35 U.S.C. 101.
9. Independent claims 1, 19, and 28 do not appear to require any computer hardware to implement the claimed invention. These claims appear to define the metes and bounds of an invention comprised of software alone. There is no support (i.e., explicitly claimed computer hardware) in the body of claim. Software alone, without a machine, is incapable of transforming any physical subject matter by chemical, electrical, or mechanical acts. If the "acts" of a claimed process manipulate only numbers, abstract concepts or ideas, or signals representing any of the foregoing, the acts are not being applied to appropriate subject matter. In re Schrader, 22 F.3d 290 at 294-95, 30 USPQ2d 1455 at 1458-59 (Fed. Cir. 1994). Transformation of data by a machine constitutes

Art Unit: 2176

statutory subject matter if the claimed invention as a whole accomplishes a practical application. That is, it must produce a "useful, concrete and tangible result." State Street, 149 F.3d 1368, 1373, 47 USPQ2d 1596 at 1600-02 (Fed. Cir. 1998). MPEP 2106. State Street required transformation of data by a machine before it applied the "useful, concrete, and tangible test." However, State Street does not hold that a "useful, concrete and tangible result" alone, without a machine, is sufficient for statutory subject matter. State Street, 149 F.3d at 1373, 47 USPQ2d at 1601.

10. Claims 19-37 are rejected under 35 U.S.C. 101 because the claimed invention, appearing to be comprised of software alone without claiming associated computer hardware required for execution, is not supported by either a specific and substantial asserted utility (i.e., transformation of data) or a well established utility (i.e., a practical application).
11. Claims 1-18 do not appear to require any computer hardware to implement the claimed invention. These claims appear to define the metes and bounds of an invention comprised of software alone. There is no support (i.e., explicitly claimed computer hardware) in the body of claims 1-18 to support the "system" of the preamble. Likewise, the "system" of the preamble of claims 1-18 appears to be a system comprised entirely of software. Software alone, without a machine, is incapable of transforming any physical subject matter by chemical, electrical, or mechanical acts.

Claim Rejections - 35 USC § 103

12. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

(b) This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

13. Claims 1-37 are rejected under 35 U.S.C. 103(a) as being unpatentable over **Barrera et al.** (U.S. 6,567,800 – filed 03/2000) in view of **Doyle** (U.S. 6,510,432).

As to claim 19

- a. Barrera teaches a document-centric method for acquiring information pertaining to a document, the document including content information (*see the Abstract*), comprising:
- (i) creating a meta-document (*e.g., Website content; see fig.1*), comprising providing the document, associating a set of pre-packaged document service requests based on a theme or context ‘personality’ (*e.g., a category is Arts&Humanities, 101, which has subcategories Literature 102 and Photography 103; col.1, lines 49-56 and fig.1*) associated with the document, wherein a document service comprises a process for using a portion of the document’s content information as a starting point to obtain

other information from a service provider pertaining to the document's content information (e.g., "*Arts&Humanities*" category is used in fig.1 as a starting point to obtain the information shown in fig.2), wherein associating a set of document service requests based on different personality to the document content information will provided different results (see figs. 1-2 and the associated text);

(ii) autonomously acting and managing the document service requests without user intervention (website content is automatically gathered and stored; col.4, lines 4-15), comprising:

- selecting a document service request from the set (e.g., selects the "*Literature*" from "*Arts&Humanities*"; see fig.1);
- analyzing the document for the document content information contained within the document exploited by the selected document service to obtain other information from a service provider (e.g., *Authors, Awards etc., are obtained from Literature*) pertaining to the document's content information (see fig.2 and the associated text);
- initiating and managing communication with the service provider to satisfy the selected document service request using the analyzed document content information (e.g., *a dynamically generated web page ...tailored to response to the query; col.5, lines 11-16*); and

- integrating any results from the selected document service request into the meta-document (*e.g., combine the best aspects of category searching and content searching of websites in a way that enables a user to more accurately and complete identify websites with content of interest to the user, especially in a large collection of websites; col.3, lines 45-50 /the results of the search are displayed to the user ... as a dynamically generated web page; col.5, lines 11-16 and see fig.10*), wherein the meta-document includes the document, the set of document service requests and integrated results (*e.g., when user selects "Authors", a document including 35 authors will be retrieved and displayed; see fig.2 and the associated text*).
- b. Barrera teaches the meta-document for document service requests. Barrera, however, does not specifically teach "*periodically polling*."
- c. Doyle teaches periodically polling (*e.g., such gathering is provided by an automated process where searches on the web are periodically carried out to locate information on a user specified topic and that information retrieved and stored in a database so that the content is accessible independent of the status of the content on the web; col.4, lines 14-23 / col.7, lines 50-60 / col.8, line 54-col.9, line 3 & col.10, lines 64-67*).
- d. It would have been obvious to one of ordinary skill in the art at the time of the invention was made to include the feature from Doyle in the system of Barrera

because it would have provided the capability for defining how often the search and archive agent will search the data sources accessible through the network for information content on the topic.

As to claim 20

Barrera teaches the personality is, among other things, Generic (*see fig.1*).

As to claim 21

Barrera teaches the results from the selected document service include a new document service request associated with the document (*e.g., The results of this category-content search are sent to the user; col.4, lines 54-65 and fig.6/ The results of the search are displayed to the user ... 'dynamically generated web page' means a web page that includes content specifically tailored to response to the user query; col.5, lines 11-16 and fig.10/ combination of category and content search provided ... produces website search result; col.5, lines 60-65*).

As to claim 22

Barrera teaches the document services are satisfied by a third party service provider via an Internet protocol (*col.2, lines 25-34; col.4, lines 4-15 and fig.5*).

As to claim 23

- a. Barrera does not specifically teach "*the scheduler updates the set of document service requests on a predetermined schedule.*"
- b. Barrera teaches the scheduler updates the set of document service requests on a predetermined schedule (*col.7, lines 50-60*).

- c. It would have been obvious to one of ordinary skill in the art at the time of the invention was made to include the feature from Doyle in the system of Barrera because it would have provided the capability for defining how often the search and archive agent will search the data sources accessible through the network for information content on the topic.

As to claim 24

- a. Barrera does not specifically teach “*the scheduler re-initiates selected document service request on a periodic basis.*”
- b. Doyle teaches the scheduler re-initiates selected document service request on a periodic basis (*e.g., such gathering is provided by an automated process where searches on the web are periodically carried out to locate information on a user specified topic and that information retrieved and stored in a database so that the content is accessible independent of the status of the content on the web; col.4, lines 14-23*).
- c. It would have been obvious to one of ordinary skill in the art at the time of the invention was made to include the feature from Doyle in the system of Barrera because it would have provided the capability for defining how often the search and archive agent will search the data sources accessible through the network for information content on the topic.

As to claim 25

- a. Barrera does not specifically teach “*the periodic basis is determined by the selected document service request.*”

- b. Doyle teaches the periodic basis is determined by the selected document service request (*e.g., the periodicity defines how often the search and archive agent will search the data source ... the periodicity may be hourly ...the topic is currently event, then the periodicity may be daily, weekly or even monthly; col.7, lines 50-60 & col.8, line 54-col.9, line 4*).
- c. It would have been obvious to one of ordinary skill in the art at the time of the invention was made to include the feature from Doyle in the system of Barrera because it would have provided the capability for defining how often the search and archive agent will search the data sources accessible through the network for information content on the topic.

As to claim 26

Barrera teaches the set of document service s follow a predetermined sequence of calls to service providers for extracting information from other documents, databases and data stores (*col.3, lines 60-67*) and for searching, for other information responsive to any extracted information from the other documents, databases and data stores (*col.4, lines 54-65*).

As to claim 27

- a. Barrera teaches the pre-determined sequence of calls to service providers are satisfiable asynchronously.
- b. Doyle teaches the pre-determined sequence of calls to service providers are satisfiable asynchronously (*col.8, lines 1-22*).

- c. It would have been obvious to one of ordinary skill in the art at the time of the invention was made to include the feature from Doyle in the system of Barrera because it would have provided the capability for defining how often the search and archive agent will search the data sources accessible through the network for information content on the topic.

As to claim 1

- a. It is directed to a system for performing the method of claim 19, and is similarly rejected under the same rationale. Additionally, claim 1 further recites “a scheduler”.
- b. Doyle teaches a scheduler (e.g., *the periodicity defines how often the search and archive agent will search the data source ... the periodicity may be hourly ...the topic is currently event, then the periodicity may be daily, weekly or even monthly; col.7, lines 50-60*).
- c. It would have been obvious to one of ordinary skill in the art at the time of the invention was made to include the feature from Doyle in the system of Barrera because it would have provided the capability for defining how often the search and archive agent will search the data sources accessible through the network for information content on the topic.

As to claims 2-4

They include the same limitations as in claims 20-22, and are similarly rejected under the same rationale.

As to claims 5-7

They include the same limitations as in claim 23-25, and are similarly rejected under the same rationale.

As to claim 8

- a. Barrera does not explicitly teach “*the meta-document, the scheduler and the service providers reside at the same location.*”
- b. Doyle teaches the meta-document, the scheduler and the service providers reside at the same location (*col.1, line 41- col.2, line 3 and col. 9, lines 50-60*).
- c. It would have been obvious to one of ordinary skill in the art at the time of the invention was made to include the feature from Doyle in the system of Barrera because it would have provided the capability for defining how often the search and archive agent will search the data sources accessible through the network for information content on the topic.

As to claim 9

- a. Barrera does not explicitly teach “*the meta-document, the scheduler and the service providers reside at the same location.*”
- b. Doyle teaches the meta-document, the scheduler and the service providers reside at different locations (*col.4, lines 40-62 and col.14, lines 24-31*).
- c. It would have been obvious to one of ordinary skill in the art at the time of the invention was made to include the feature from Doyle in the system of Barrera because it would have provided the capability for defining how often the search and archive agent will search the data sources accessible through the network for information content on the topic.

As to claims 10-11

They include the same limitations as in claims 26-27, and are similarly rejected under the same rationale.

As to claim 12

Barrera teaches the document and the set of document service requests are user-selectable (*col.4, lines 54-65 and fig.1*).

As to claim 13

- a. Barrera teaches a user may select a document service request from the set and initiate and manage communication with a service provider to satisfy the selected document service, but does not specifically teach “the scheduler”.
- b. Doyle teaches the scheduler (*e.g., the periodicity defines how often the search and archive agent will search the data source ... the periodicity may be hourly ...the topic is currently event, then the periodicity may be daily, weekly or even monthly; col.7, lines 50-60*).
- c. It would have been obvious to one of ordinary skill in the art at the time of the invention was made to include the feature from Doyle in the system of Barrera because it would have provided the capability for defining how often the search and archive agent will search the data sources accessible through the network for information content on the topic.

As to claim 14

Barrera teaches a list of document service requests from which the set of document service requests may be selected by a *user (e.g., searching all of the content of the universe of websites initially; col.2, lines 56-67 and fig.1).*

As to claim 15

Barrera teaches the service provider is user-selectable (*e.g., searching all of the content of the universe of websites initially; col.2, lines 56-67 and fig.1).*

As to claim 16

Barrera teaches a service provider can register additional document services to the list (*e.g., Registered Sites List; fig.7).*

As to claim 17:

Barrera teaches a list of service providers available for satisfying document services (*col.4, lines 4-34).*

As to claim 18

Barrera teaches the set of document service requests associated with the document are associated using metadata (*col.5, lines 43-46).*

As to claim 28

- a. The rejection of independent claim 19 above is incorporated herein in full.
Additionally, claim 28 further recites “a document including content information”.
- b. Barrera teaches a document including content information (*e.g., website content; col.4, lines 4-7).*

As to claims 29-34, 35-36 and 37

They include the same limitations as in claims 2-7, 10-11 and 18, and are similarly rejected under the same rationale.

Response to Arguments

14. Applicant's arguments filed 10/21/2005 have been fully considered but they are not persuasive.

Applicant argues that *in Barrera et al.*, the user must input a topic to be searched. In Applicant's system and method, each document service analyzes the document for document content information to be exploited by the document service to obtain other information from a service provider pertaining to the document's content information (Remarks, page 10).

In response, Applicant is arguing the disclosure, not the claim limitations. The limitation "each document service analyzes the document for document content information to be exploited by the document service to obtain other information from a service provider pertaining to the document's content information" is not claimed. Claimed subject matter, not the specification is the measure of the invention. Limitations in the specification cannot be read into the claims for the purpose of avoiding the prior art. See In re Self, 213 USPQ 1,5 (CCPA 1982); In re Priest, 199 USPQ 11, 15 (CCPA 1978). The Examiner has a *duty* and *responsibility* to the public and to Applicant to interpret the

claims *as broadly as reasonably possible* during prosecution (see *In re Prater*, 56 CCPA 1381, 415 F.2d 1393, 162 USPQ 541 (1969)).

Applicant argues that *Barrera does not teach a "personality."* (Remarks, page 10).

In response, it is noted that independent claims 1, 19, and 28 require *a theme or context* ("*personality*"), not both. Barrera teaches a theme (e.g., Literature, Photography...) and personality (e.g., *Arts* for people who interest in Arts or *Computers & Internet* for people who interest in computers and Internet [see fig.1]).

Conclusion

15. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
